UPGRADING GUIDELINES

Revised, March 2003

Item I - OBJECT

A. The North American Wensleydale Sheep Association (NAWSA) supports the development of purebred white and colored Wensleydale sheep from the crossing of specific non-Wensleydale ewes with purebred Wensleydale rams. The first generation (50%) blood bred back to a purebred Wensleydale sire produces a 75% blood. A second generation (75% blood) female, bred back to a purebred Wensleydale sire produces an 87% blood, the fourth generation produces 93%, and a fifth generation produces 96%.

Item II - FOUNDATION EWES

The non-Wensleydale ewes used in the first cross must be registered with one of the following U.S. breed associations. No other foundation breeds shall be recognized.

1. Cotswold - American Cotswold Record Association, Cotswold Breeders Association, Black Cotswold Society
2. Leicester Longwool - Leicester Longwool Sheep Breeders Association
The NAWSA strongly discourages the use of Leicester Longwools due to their low population in the U.S.
3. Lincoln - National Lincoln Sheep Breeders Association

Item III - PROCEDURES

A. There is no discrimination or separation of record keeping for colored animals. Fleece color and Codon 171 status, if known, will be noted on the registration certificate. Fleece color will be indicated by a suffix to the registration number. White-fleeced animals will be identified by the suffix "W", and animals other than white will be identified with suffix "C".

B. All first cross lambs must be sired by use of imported 100% Wensleydale semen. Ewe lambs from this cross will be registered as 50% Wensleydale. First cross male lambs will not be registered. All rams must be at least 75% Wensleydale blood and test RR at codon 171 to be eligible for registration.

C. A sire must be registered as 75% Wensleydale or higher before any progeny are eligible for registration.

D. Lambs will be registered with their blood percentage calculated from the use of two registered parents, i.e. 50% dam crossed with a 75% sire results in a 62% lamb. If this lamb is male, it is not eligible for registration. (Refer to Item III B).

E. Rams with 75% to 95% Wensleydale blood and Ewes with 50% to 95% Wensleydale blood will be issued registration numbers with the prefix "B".

F. An animal of either sex will be considered a purebred American Wensleydale when their percentage meets or exceeds 96% (31/32) Wensleydale blood. Sheep submitted for NAWSA purebred status must meet the breed standards set forth by the Wensleydale Longwool Sheep Breeders Association, U.K.

G. The NAWSA has set codon 171 standard for the use of imported semen, and beginning January 1, 2000, only semen from rams testing RR at codon 171 will be eligible to sire recorded or registered animals. The only exception to this rule is Upper Mill Cracker, a colored ram that has already been imported and used in the United States. This ram has tested QR at codon 171.

Item IV - DETERMINING PERCENTAGE

The sire and dam Wensleydale percentages are added together and divided by two. The resulting figure is truncated to whole numbers (e.g. 87.5 becomes 87). This number is the percent Wensleydale of the lamb. Rams of 70-100% (testing RR at codon 171) and ewes of 50-100% are eligible for registration.

2003 In Retrospect

by Neil Kentner, NAWSA President

The North American Wensleydale Sheep Association has made great strides in being recognized in the many arenas of the sheep industry world.

The year began with the usual lambing of 2003 offspring from LAI and natural breeding. The numbers of upgraded rams and ewes did not increase as much as we had expected due to limited imported semen availability, yet we still have new offspring in the foundational flocks of Wensleydale percentages. Some of our members have been able to progress to second and third generation animals (75% and 87% blood). We were able to see lambs and yearlings exhibited at various events across the country, from the nationally acclaimed Maryland Sheep and Wool Festival, Black Sheep Gathering, North American International Livestock Exposition (NAILE) to many state and county fair events. Yes, I can say that we have been seen and heard with our wonderful Wensleydales.

The continued problem of processing the UK Wensleydale semen that was placed in a stop-action mode by the USDA in early 2001 has made us realize that governmental procedures can and do put a "crimp in the hose" of bringing more genetic diversity into the states. Decisions by many persons, with persistent calls, email messages and physical contacts kept the momentum going and resulted in the canisters projected to arrive in the United States in early 2004.

Once again this action was regrettably too late for the majority of our members to utilize imported Wensleydale semen for the fall 2003 breeding season. Each year we seem to be faced with new challenges as we move closer to achieving our own American Wensleydale rams and ewes. Patience and Perseverance are my guiding words to our membership. We will have North American Wensleydale Sheep of the purest lines some day soon.

We can sense the passion and desire among all of us to achieve the goal of having purebred American Wensleydale Sheep and I encourage all Association members to remember to work as team members in this endeavor. The attributes of breeder honesty and integrity are paramount, and this influences not only the reputation of each individual breeder, but also reflects upon the Association as a whole.

I have learned over the years that you can gain knowledge from others by listening, watching, asking logical questions and receiving constructive criticism. We all need to take these thoughts to heart and I hope that we can build an even stronger, more unified camaraderie as breeders and exhibitors of Wensleydale Sheep.

Our organization has had the usual growing pains of differing opinions and ideas, and maintaining open channels of communication across the USA has been a challenge. We must all keep in mind that the greater goal is what was established at the formation of our organization – to breed the finest animals and to promote the attributes of Wensleydale sheep. I am sure that we can all work together, with our unique contributions to the organization and let the world know how we can and will grow and go with North American Wensleydale sheep.

As I conclude this pep talk to all our members, breeders and interested persons about Wensleydales, I would like to state that the inquiries about our breed continue to increase. Our animal numbers are growing and we must remember that we are the ambassadors of the organization – sharing information and cooperating in the marketing of the animals and their products whenever possible. I have coined a phrase that the Wensleydale sheep is "More than just another pretty fleece" – We have meat quality, crossing sire potential and the wool that is cherished by many.

Keep promoting what we represent –
The Wensleydale Sheep!

North American Wensleydale Sheep Association, est. 1999
